EXPOSING US MILITARISM’S CLIMATE DAMAGE

- its vast and largely unreported greenhouse gas (GHG) emissions
- its role in providing military protection for oil corporations
- its squandering of trillions needed for addressing climate and people’s needs
- its promotion of war—a human, climate and environmental disaster

COALITION-BUILDING

In 2021, CCMP gathered hundreds of endorsements from organizations and prominent individuals worldwide urging Climate Envoy John Kerry to address the military’s role in the climate crisis. One CCMP member attended COP26 in Glasgow; another went to COP27 in Egypt and attended COP28 virtually, working with other attendant groups on climate and militarism issues.

CCMP heads up coalitions of climate groups on the NO MAS! (NO Military Air Shows) campaign, increasingly with 350.org. We work with local organizations and municipalities on “Move the Money” resolutions telling Congress to move money away from militarism. We are engaged with unions and labor groups in the Veterans and Labor for Sensible Priorities campaign for labor endorsement of People Over Pentagon (POP)—see below.

LEGISLATIVE WORK

CCMP supports the People Over Pentagon (POP) bill (H.R. 1134) calling for a $100 billion decrease in the Pentagon budget.

VIA THE CCMP WEBSITE, URGE YOUR MEMBER OF CONGRESS TO CO-SPONSOR H.R 1134.

REPORTING & REDUCING MILITARY GREENHOUSE GAS (GHG) EMISSIONS

The climate movement’s reluctance to focus on military emissions stems both from the general U.S. difficulty in challenging militarism and from the lack of reporting of military emissions—bowing to U.S. pressure, the 1997 Kyoto Protocol stipulated that most military emissions would not count toward any country’s national totals. The U.S. military is globally the largest institutional source of GHG, emitting more than the militaries of the next 10 countries combined. The Department of Defense (DoD) has only reported its emissions to Congress once, in 2021. Following executive orders from Biden, in 2022 DoD issued GHG emission reduction goals, but with neither concrete plans nor Congressional funding to implement them. To see the plans and reports, visit Tracking Federal Climate Efforts on the CCMP website.

RACISM & ENVIRONMENTAL JUSTICE

The environmental justice and climate justice movements have increasingly organized in frontline communities, opposing the climate and environmental damage from fossil fuel and other corporations that have heavily affected Black, Indigenous and people of color, poor and working-class people. We focus our public education efforts (140+ presentations to date) and activism on environmental and climate damage due to war, to 750 overseas U.S. military bases, and to stateside military bases with their toxic legacies.

REDUCING THE U.S. MILITARY BUDGET & REDIRECTING FUNDS

In the United States, militarism is considered indispensable, unchangeable, benign, and/or invisible. Money for the military and wars, over $21 trillion since 2001, appears to come from some magical source and without the limitations applied to social program funds. Results? Not one U.S. war or intervention in the last 75 years has helped create a stable democracy. Meanwhile, the Pentagon has failed all six of its audits. Money going to fund U.S. global militarism should be re-directed to support displaced workers, fund public health, end poverty, transition to renewables, and promote ecological preservation and restoration.

U.S. vs. World Military Spending, 2023

Global Total: $2.443 Trillion

People of the Global South suffer most from our Climate Crisis and contribute to it the least.

Island nations are already heavily impacted by rising sea levels; refugees in record numbers are fleeing both climate catastrophes and war.
DE-MILITARIZING U.S. FOREIGN POLICY

Military buildups, war exercises, and wars emit great quantities of GHGs and squander money; they also destroy the basis for cooperation among nations needed to address our major threat, the climate crisis. For example, the Russian invasion of Ukraine is prompting a new arms race. The wars in Gaza and Ukraine not only inflict suffering on their populations but also deplete global humanitarian funds, while risking nuclear annihilation. The U.S. must negotiate with “allies” and “foes” alike to prevent or stop conflicts; there is no negotiating with Mother Nature.

OPPOSING MILITARY GREENWASHING

There are no “green” wars. To significantly reduce its emissions, the U.S. military must shrink. At present size, achieving carbon neutrality for the entire US military is extremely unlikely. Although DoD claims it will be “net zero” by 2050, only miniscule funds are allocated beyond small pilot programs for bio-aviation fuels and charging stations for non-tactical vehicles.

OUR GOALS

CCMP strives to bring climate awareness to VFP members and chapters, and to bring the issues of militarism to the forefront of the climate movement. Our work supports VFP’s foundational goal of abolishing war as an instrument of national policy.

CLIMATE CRISIS & US MILITARISM

(CLIMP) of Veterans For Peace (VFP) is part of the worldwide movement to mitigate the climate crisis and promote peace and justice—climate, racial, and economic.

As educators and activists, we focus on U.S. militarism’s damage to the climate.
